

## Data Modelling Continue .....

---

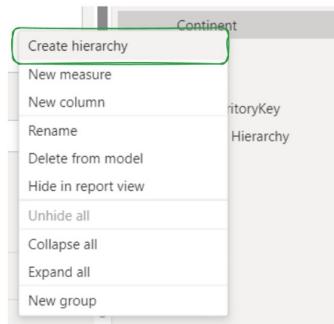

→ Hierarchy - [Drill Up , Drill Down] → Report View

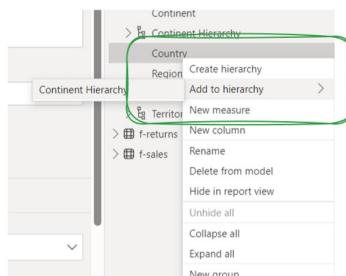

→ Adding Columns into Hierarchy.

1. To create an Hierarchy.

Select the Continent - Right Click And Create Hierarchy.

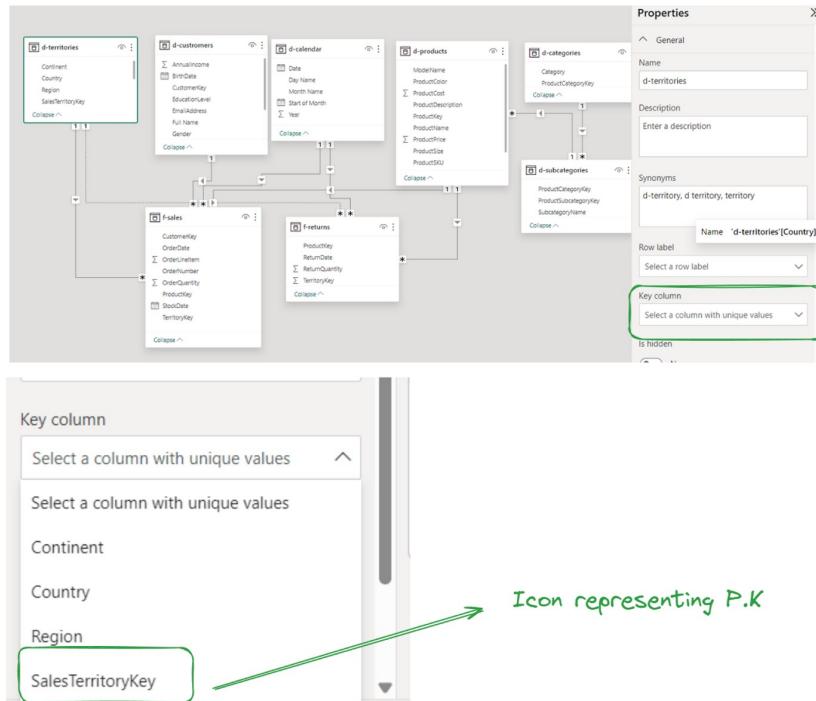

Add other column using add to hierarchy , that you have already created.

→ Model View . Each Column should have proper way of representing the dat.

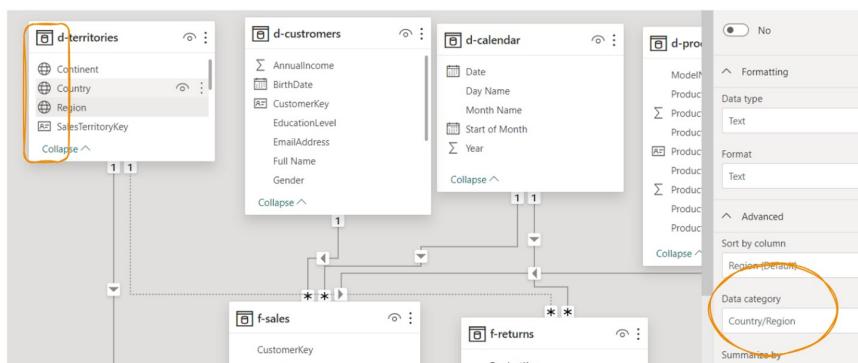

→ Model View . Each Column should have proper way of representing the dat.

→ In My Territory Table , SalesTerritoryKey is the P.K

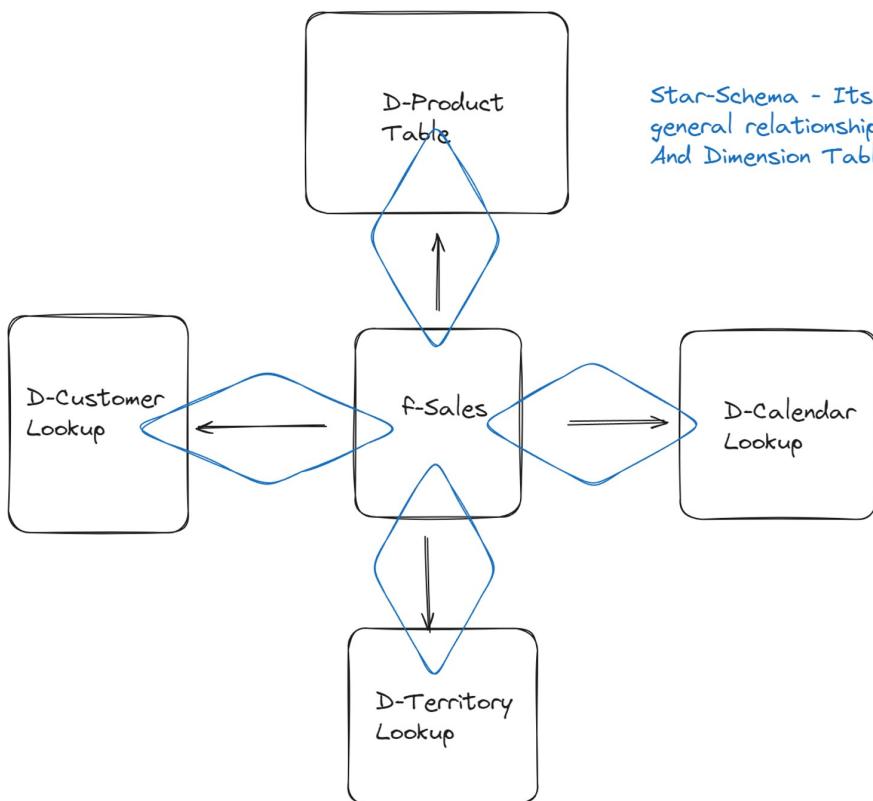

→ Add an icon of Primary Key with the help of defined steps above.

- 5 Tables :
- Sales Territory Key.
- Customer Key.
- Product Key.
- Product Category Key.
- Product Sub-Category Key.

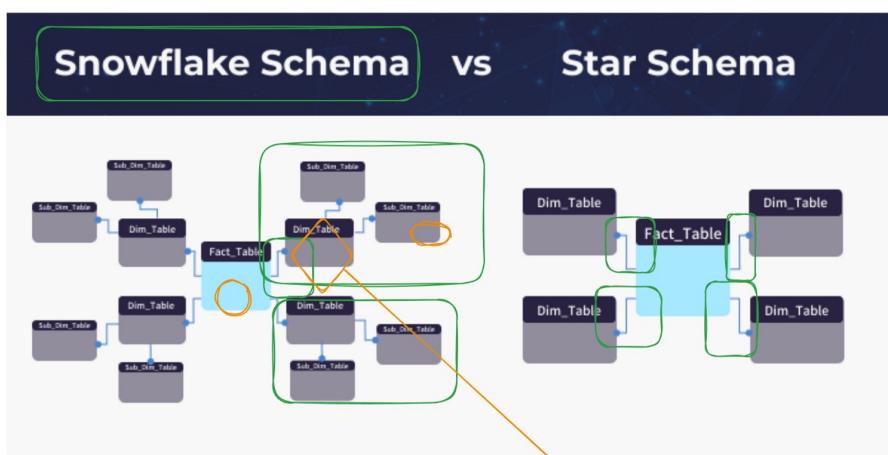

→ Add an icon of Primary Key with the help of defined steps above.

→ Difference between Star Schema / Snowflake Schema

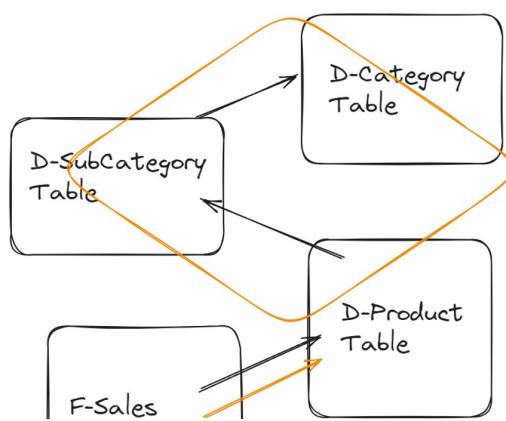

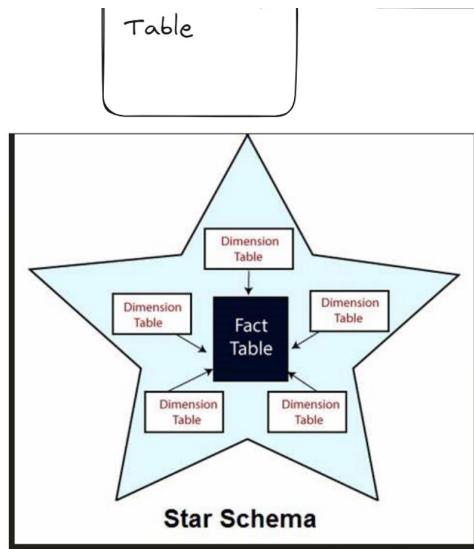

Star-Schema - Its nothing but a general relationship between Fact Table And Dimension Table.

→ Snow Flake Schema

Lookup : It helps me to get the relationship and based on that I can find some insight.

### Star Schema

Connection Of Dimension Table And Fact Table.

### Snowflake Schema

Connection Of Dimension Tables, Fact Tables, And Sub-Dimension Tables

→ Layout Page : You want to build specific relationship for a particular table , instead of dealing every individual table .  
 > Create a New Layout and start building the relationship.
