65	San Francisco	1935		3000	3417		
84	Seattle	1590					
13					2879		
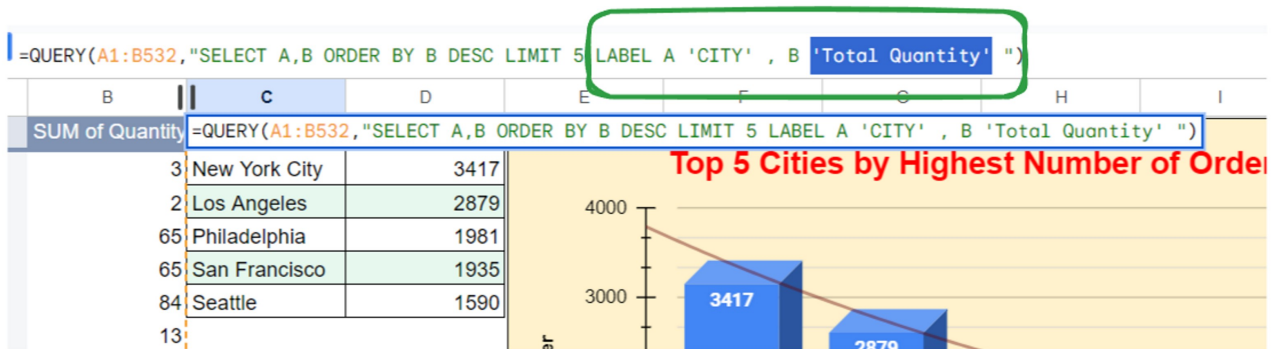

IMPORTRANGE:

The `IMPORTRANGE` function in Google Sheets is a powerful tool that allows you to import data from one Google Sheets spreadsheet to another. It's particularly useful when you have data distributed across multiple sheets, and you want to consolidate or reference it in a central location.

Syntax:

```
=IMPORTRANGE(spreadsheet_key, range_string)
```

- **spreadsheet_key**: The key of the spreadsheet from which to import data.
- **range_string**: The range of cells to import, in the format "Sheet1!A1:B10".

sheet 1

Ref sheet

Changes done on the main sheet will be reflected to the reference sheet.
